June-July 2025

## FROM THE FRONT LINES

Greetings,

Inside this edition of the **Firebrand Partner Newsletter** you will find we have embarked on the largest project of our mission to date. This project without a doubt encompasses the largest scope, extends the furthest reach, and will undoubtedly have the greatest impact in the history of our mission to date. In terms of souls we are believing for thousands to be won for Christ. In regards to the amount of people to hear the gospel, churches to be started, groups multiplied, hours of bible study to be conducted and discipleship hours which will be deployed, this is by far the largest project we've taken on for the sake of Christ in the history of our mission, not just in Kenya.

Based on the regional penetration, the developed leadership, the amount of training we've been graced to do, the mission in Kenya is positioned at this time to lead several thousand to Christ and start several new groups and churches over the next 12-24 months.

We couldn't be more excited for what God is about to do in Southeastern Kenya! And of course we can't do it alone, this is why we are announcing a major campaign called HOPE 2025. The campaign has launched as of the writing of this letter and will run through the end of this year. The campaign is grass roots and this is where we could use your help as there will be several ways you and others you know can participate and be a blessing to families in Southeastern Kenya.

Below you can read the initial announcement regarding the project we have been led to take on. Pray with us on how you may participate as we lean into a whole new season of the mission in Kenya.

Blessings in Christ.

# Southeastern Kenya

Contaminated Drinking Water

Contaminated drinking water is the reality for most people who are poor and live the rural areas existing on about two dollars a day. For most of these people this is just how it is. Lack of hygienic toilets, lack of rainfall, agricultural runoff, population growth, government corruption, no infrastructure all contribute the water situation. Actually the water situation is only getting worse not better.

## Fetching Water

Water Source

Fetching water is a daily chore for most families where the woman and young girls can spend up to two hours depending how far they have to go just to fetch contaminated water that is going to make them sick. And depending on the community, families encourage one another to not let the young girls go and fetch water alone as this can be dangerous. Just think we relieve ourselves in safe drinkable water everyday.

## New Life Filter

After planting churches and by God's grace having had developed a team of leaders, prayerfully TSP has decided to take up the burden of providing families with the gift of clean water while at the same time sharing the gospel with them and providing an opportunity to personally receive Christ as Savior. We believe people should not only have clean water to drink but also hear the gospel and opportunity to respond to Christ personally.

# CLEAN WATER PROJECT

## Kwa Vonza, Southeastern-Kenya

### HOPE 2025: Clean Water Project

Hope 2025 is a clean water project which will provide clean water and an opportunity to hear the gospel and respond to Christ to 16,500 people who are in desperate need of both.

Pictured above is an aerial view of Kwa Vonza and its surrounding areas. This portion of Southeastern Kenya is part of the ASAL-Arid and Semi-Arid Lands. The rainfall can be scarce and often times the local inhabitants don't get enough rainfall to harvest as the people here all do terrestrial farming, which means they depend on the rain to farm their crops.

The surrounding towns and villages all suffer from severe lack of access to clean drinking water and many become sick with diarrheal diseases stemming from all kinds of waterborne bacteria causing all kinds of health challenges like cholera, E-coli, dysentery, typhoid to name a few.

All are affected by contaminated water, but children 5 years and under are the ones affected the most as the bacterial infections cause development issues and wrecks havoc on their little systems which are unable to fight the infections and diseases and in some cases becomes the root cause of childhood death.
